Report Distribution Plan

One of the steps to obtain Hydropower Sustainability certification based on the Hydropower Sustainability Alliance Standard is the publication of the preliminary assessment report for public consultation.

This step will last for 60 days and is scheduled to take place between September 29 and November 27, 2025. To ensure that the surrounding communities (municipality of Porto Velho) and key stakeholders of the project have access to the document and can submit their comments, Eletrobras proposes the following methods for making the preliminary assessment report available and receiving comments:

- Publication in English and Portuguese on the Eletrobras and Santo Antônio websites. On both web pages, there will be a link to the corresponding page on the HSA site and to the Public Consultation form;
- Sending an email notification about the public consultation and access information to the Civil Defense and Fire Department of Porto Velho, the Jirau Hydroelectric Power Plant, the environmental regulatory agency (IBAMA) as well as other key stakeholders interacting with the Santo Antonio Hydroelectric Power Plant;
- Printed version of the report at Municipality Government of Porto Velho, with hand delivery to the mayor. A QR Code will be on the cover of the report directing to the form for submitting comments;
- Printed version of the report (in Portuguese), as well as a locked box for comments, at Antonio Augusto Vasconcelos School for the Vila Nova Teotônio Resettlement Residents' and at Joaquim Vicente Rondon School for the Parque Buritis Resettlement Residents';
- Printed version of the report (in Portuguese), as well as a locked box for comments, for the Residents' Association of "Riacho Azul", "São Domingos" and "Cachoeira dos Macacos", with hand delivery to the President;
- Printed version of the report at the main gate of the power plant, located in Porto Velho, with a QR Code on the cover directing to the form in Portuguese for submitting comments on the Santo Antônio Hydroelectric Power Plant, for the consultation of employees, third parties, and other interested parties.

Printed comments will be collected by the manager of the Santo Antonio Hydroelectric Power Plant, 30 days after the beginning of the consultation and again, after 30 days, and forwarded to the HSA Secretariat for evaluation. We believe this approach ensures that everyone who wishes to provide their comments will have the opportunity to do so, ensuring the transparency of the process.
